

COGNITELL

ENABLING DATA INTELLIGENCE

Empowering Institutional Researchers To Dive into Data Science

Here at Cognitell, we build complex data pipelines and machine learning models using data from Student Information Systems (SIS), Learning Management Systems (LMS) as well as other relevant data sources to assist in the prediction of student retention and future enrollment. Our processes free up the manual work Institutional Researchers are often burdened with, giving them time to focus on the other important aspects of their job allowing them to dive back into data science.

Existing COTS Solutions

Cognitell's Engineered Solution

Cognitell's Student Retention solution provides a number of benefits to colleges and universities:

- Solution tailored to your student body
- Utilizes existing data sources
- Increases predictive power by combining disparate sources of data
- Have the ability to provide concrete action recommendations
